Submission Status	Completed

Submission Details

Problem/Concept Title	Digital Welfare: a citizen-first platform to discover, calculate and apply for public welfare
Theme	governance-civic-technology
Theme Description & UNSDG Alignment	The project supports the following UN Sustainable Development Goals (SDGs): SDG 1 – No Poverty: Helps eligible citizens discover and access financial assistance and welfare benefits. SDG 10 – Reduced Inequalities: Makes government welfare information more accessible to underserved and disadvantaged communities. SDG 16 – Peace, Justice and Strong Institutions: Promotes transparent, accessible, and citizen-friendly delivery of public services.
Problem Statement	Many eligible citizens in India are unaware of government welfare schemes or struggle to understand their eligibility, benefits, required documents, and application procedures. Students, farmers, women, senior citizens, and economically weaker sections are particularly affected. Scattered information across multiple portals, complex criteria, outdated details, and limited digital literacy create barriers to accessing welfare benefits.
Solution Description	Digital Welfare uses a citizen-first web platform built with React, Next.js, and web crawling to simplify access to government schemes. Key features include scheme discovery, eligibility checking, benefit calculation, updated scheme information, and redirection to official application portals. It aims to reduce information gaps, save citizens' time, improve awareness, and make welfare services more accessible, transparent, and inclusive, especially for underserved communities.
